

## Editorial

**Dr Mohit Tantia**  
**Vice Chairperson**  
**Tantia University , Sriganaganagar**

I am pleased to introduce our multispecialty journal, Tantia University Journal of Medical and Dental Sciences. The launch of this journal marks an important academic milestone in our institution's continued commitment toward excellence in education, research, innovation, and evidence-based healthcare.

In the rapidly evolving fields of medical and dental sciences, knowledge is continuously expanding through scientific inquiry, technological advancement, and clinical innovation. The need of the hour is not only to acquire knowledge but also to critically analyze existing concepts, encourage intellectual curiosity, and embrace emerging perspectives that can contribute to the betterment of patient care and society at large. With this vision, our journal has been initiated as a multidisciplinary academic platform dedicated to the dissemination of high-quality scientific research and scholarly work.

This journal aims to provide an open and dynamic forum for the presentation, exchange, and critical evaluation of original research, innovative ideas, clinical experiences, and contemporary developments in medicine and dentistry. In addition to scientific research, the journal will also encourage discussions on broader healthcare issues including medical and dental education, public health challenges, healthcare economics, ethics in

clinical practice, human resource development, and healthcare delivery in resource-constrained settings. We strongly believe that scientific progress must be accompanied by ethical responsibility, compassion, and social accountability.

The success of any scientific journal depends upon the dedication, integrity, and vision of its editorial leadership. I invite researchers, academicians, healthcare professionals, and students to actively participate in this academic endeavor by contributing original research articles, reviews, case reports, and innovative ideas that can enrich scientific understanding and improve healthcare outcomes.

I am confident that this journal will serve as a valuable source of scientific knowledge, inspire young researchers, promote interdisciplinary collaboration, and contribute meaningfully to the advancement of medical and dental sciences. I wish the editorial team and contributors great success in this noble academic initiative and look forward to the journal achieving new heights in the years ahead.

With best wishes for a successful beginning and a bright future.
